

## Obstruction lighting system (phase conductor light) for high voltage lines, red fixed low intensity, option with vibration damper on the lamp

Balisor (conductor warning light) with vibration damper

- suitable for high voltage up to 550KV with fixing accessories adapted to the diameter of the cable
- rigid capacitive element in aluminium easy to install
- optimized distance of 300mm between the power cable and the capacitive element providing optimal power to the light
- clamps adapted to the diameter of the cable
- long life BALISOR lamp B49 P/N100618 with interference suppression included
- red fixed color with light intensity higher than 10 candelas, the BALISOR® fall into the ICAO low intensity category.
- a very long lifetime of the balisor lamp, essential to continuous operation of high voltage lines
- robust, operates as soon as power line is turned on, no current in the conductor is required

The power supply by capacitive elements ensures a constant light intensity whatever is the value of the electric current crossing the line

### Option anti-vibration device

| Mechanical Characteristics  |                                                          |
|-----------------------------|----------------------------------------------------------|
| Attachment                  | Aluminium clamps matching with the diameter of the cable |
| Photometric Characteristics |                                                          |
| Luminous intensity          | > 10 Cd                                                  |
| Standards                   |                                                          |
| Standards compliance        | ICAO Aerodrome Design Manual Part 4 chapter 14           |
